

FAISAL KHAN

CloudOps Engineer | Junior DevOps Engineer

+91-8374452927 | fk.faisalkhan35@gmail.com | <https://www.linkedin.com/in/faisal-khan-74501532a/>

PROFESSIONAL SUMMARY

Cloud & Junior DevOps Engineer with hands-on experience in AWS Cloud, Linux Administration, Git, Infrastructure Monitoring, Troubleshooting, and Automation. Skilled in deploying and managing cloud infrastructure, monitoring system performance using Prometheus, Grafana, and CloudWatch, and supporting CI/CD workflows using Jenkins and GitHub. Experienced in AWS services including EC2, EKS, S3, IAM, VPC, and RDS through real-world projects.

EXPERIENCE

Full Stack Academy

AWS DevOps Engineer Intern

- Assisted in infrastructure monitoring, troubleshooting, and operational support activities across AWS cloud environments.
- Built and maintained CI/CD pipelines using Jenkins and GitHub for automated deployments.
- Worked with GitHub branching strategy, pull requests, and collaborative workflows.
- Automated operational tasks using Python and Shell scripting.
- Worked with container-based platform services including Docker, ECS, EKS, and Kubernetes for scalable application deployments.
- Deployed containerized applications on Kubernetes clusters including EKS environments.
- Basic exposure to Azure Kubernetes Service (AKS) deployment concepts and architecture.
- Worked on observability and monitoring solutions using CloudWatch, Grafana, Prometheus, Loki, and centralized logging.

EDUCATION

Swathi Institute Of Technology & Sciences

2023

Bachelor Of Engineering (Computer Science)

CERTIFICATIONS

- AWS & DevOps Certificated - FSA
- Linux Certification - FSA
- Cloud Computing- FSA
- DevOps Certificated - Elevate Labs
- Relevant Coursework - Cloud Computing, Infrastructure Automation, CI/CD Pipelines, Containerization, Monitoring, DevOps Practices

SKILLS:

Cloud Platforms:

AWS (EC2, S3, IAM, VPC, RDS, ECS, EKS, Route 53, CloudFront, Auto Scaling, CloudWatch).

Operating Systems:

Linux, Windows.

CI/CD:

Jenkins, GitHub Actions, GitLab CI/CD (Basic).

Kubernetes:

Minikube, EKS, AKS.

Containerization & IaC:

Docker, ECS, Terraform.

Networking:

DNS, HTTP, Reverse Proxy, SSL/TLS, HTTPS Configuration.

Monitoring & Logging:

Prometheus, Grafana, ELK, CloudWatch, OpenSearch, Fluent Bit, Fluentd.

Configuration Management:

Ansible.

Version Control:

Git, GitHub, Branching Strategies, Pull Requests.

PROJECTS

End-to-End CI/CD Pipeline using GitHub, Jenkins, Docker, Kubernetes (EKS), Monitoring and Automation:

- Built CI/CD pipelines using Jenkins and deployment workflows inspired by Azure DevOps practices.
- Automated repetitive deployment tasks through Bash and Python scripting.
- Integrated SonarQube for static code analysis and code quality validation.
- Built and scanned Docker images using Trivy for vulnerability detection and DevSecOps practices.
- Deployed applications to AWS EKS using Helm with rollback support.
- Implemented blue-green and rolling deployment concepts for improved release reliability.
- Configured Slack notifications for build and deployment status.
- Created monitoring dashboards using Prometheus and Grafana for application and infrastructure metrics.

Infrastructure as Code (IaC) Automation with Terraform for AWS:

- Applied Infrastructure as Code concepts with reusable modules and infrastructure automation.
- Worked with deployment procedures and environment-specific infrastructure configurations.
- Configured S3 backend for Terraform state storage with versioning enabled.
- Implemented DynamoDB state locking for safe Terraform state management.
- Built multi-environment EKS infrastructure (Prod, QA, Staging) using environment-specific tfvars.
- Provisioned SSM-enabled EC2 nodes for secure, keyless access to EKS worker nodes.
- Modularized EKS and IAM resources into reusable Terraform modules for scalability.
- Automated Jenkins deployment on EC2 with IAM roles, pipelines, and required plugins.
- Automated SonarQube deployment on EC2 using IAM roles and secure credentials.

AWS EC2 Website Hosting with CloudFront and Route 53:

- Hosted a web application on AWS EC2 with CloudFront CDN integration.
- Configured Route 53 DNS records for custom domain resolution.
- Enabled HTTPS using CloudFront SSL/TLS for secure web access.
- Ensured scalable and highly available content delivery on AWS.

Kubernetes Deployment with Multi-Database Integration And Monitoring:

- Integrated Amazon RDS databases (MySQL, Oracle, PostgreSQL) with Kubernetes using ExternalName services to enable scalable and reliable connectivity.
- Secured database credentials by implementing Kubernetes Secrets, ensuring controlled access and improved security posture.
- Implemented Prometheus monitoring to collect CPU and system-level metrics, supporting proactive performance monitoring and troubleshooting.
- Centralized application and infrastructure logs using Loki and Promtail, with Grafana dashboards for real-time visualization and analysis.

Three-Tier Application Deployment on AWS ECS:

- Deployed a production-ready 3-tier application on AWS ECS with ALB, Auto Scaling, Multi-AZ RDS, monitoring (CloudWatch), and basic incident handling.
- Configured ECS services and task definitions to manage container orchestration efficiently.
- Integrated the Java backend API with the frontend website, enabling seamless communication and functionality.
- Deployed a MySQL database container for persistent data storage and high availability.
- Implemented Amazon CloudWatch monitoring to track performance metrics and scale resources automatically based on demand.
